

Federal Funding Opportunities for Climate, Sustainability and Energy

Opportunities for Municipalities

The Inflation Reduction Act of 2022 (IRA) invests over \$60 billion in critical clean energy, climate and electrification measures and puts the U.S. on path to a 40 percent emissions reduction by 2030. The IRA contains numerous opportunities for municipalities to leverage these dollars to improve the quality of life for residents, reduce their utility costs, and modernize homes and businesses.
